When I started challenge ,i see page show item to me so I click on one of them and I saw details

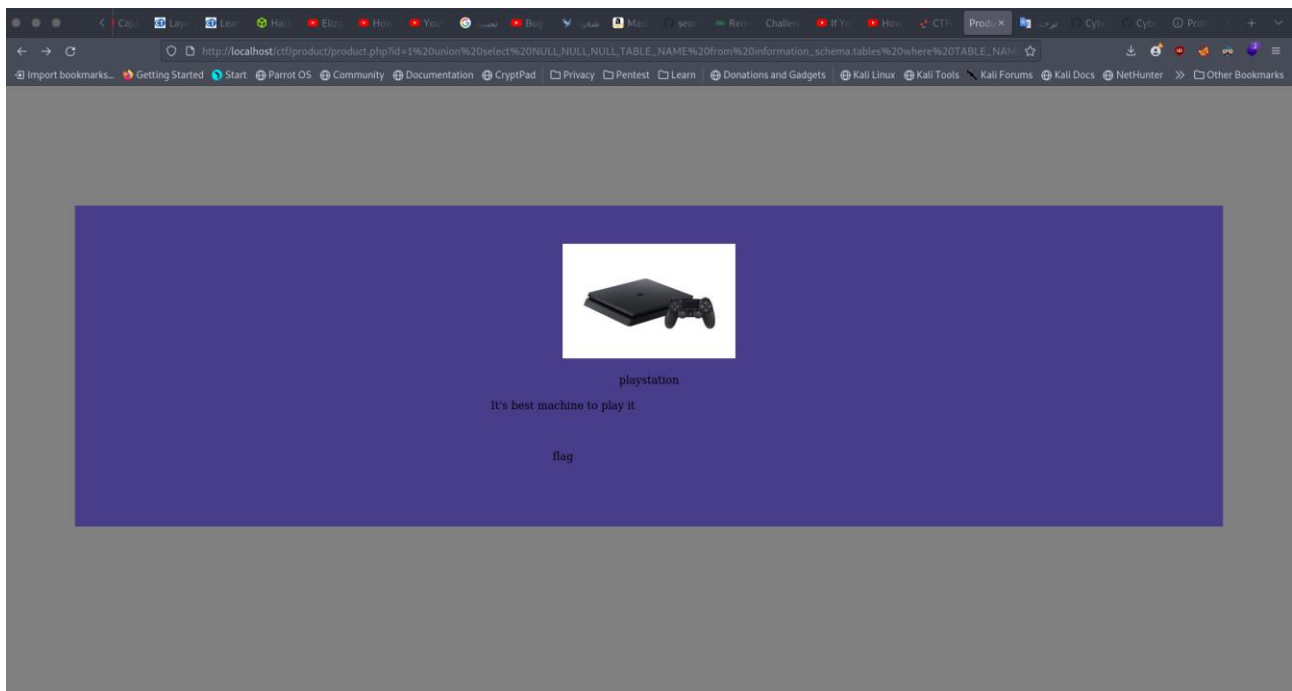

But in the url I see parameter called id so I change his value to see the details for other items and that worked so I try maybe idor but that didn't work and then I try sql injection so I put ' but all the data became disappeared and I put '' and same thing happened so I try to do this payload →

?id=1 order by 1 and the data didn't disappeared so I change the value in order by to know how much column in this table and when the value for order by is 5 the data is disappeared so I know now the columns is 4 so I do this payload → 1 union select NULL,NULL,NULL,TABLE\_NAME from information\_schema.tables where TABLE\_NAME LIKE '%flag%' and I see the that that table what contain in his name the word flag

and that what I see

So I get now the name for table and I need now to know the column name so I enter this payload

→ 1 union select NULL,NULL,NULL,COLUMN\_NAME from information\_schema.columns where TABLE\_NAME='flag'

and show for me the column and there is one column only called flag so I enter this payload to read the data from flag → 1%20union%20select%20NULL,NULL,NULL,flag%20from%20flag

and I see the flag in the page
